 *
 * @package WordPress
 */

require( ABSPATH . WPINC . '/option.php' );

/**
 * Convert given date string into a different format.
 *
 * $format should be either a PHP date format string, e.g. 'U' for a Unix
 * timestamp, or 'G' for a Unix timestamp assuming that $date is GMT.
 *
 * If $translate is true then the given date and format string will
 * be passed to date_i18n() for translation.
 *
 * @since 0.71
 *
 * @param string $format Format of the date to return.
 * @param string $date Date string to convert.
 * @param bool $translate Whether the return date should be translated. Default true.
 * @return string|int|bool Formatted date string or Unix timestamp. False if $date is empty.
 */
